

## Project Design Phase-II Technology Stack (Architecture & Stack)

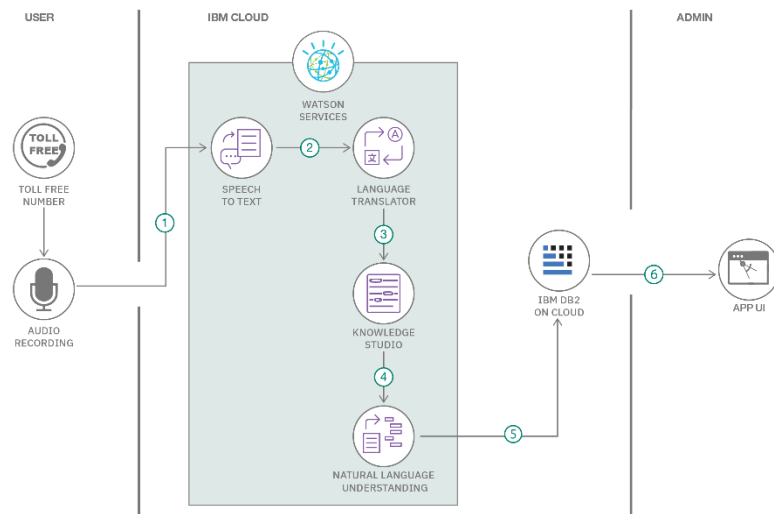

|               |   |
|---------------|---|
| Date          | 27 June 2025  |
| Team ID       | LTVIP2025TMID38971  |
| Project Name  | pollen's profiling: automated classification of pollen grains |
| Maximum Marks | 4 Marks   |

### Technical Architecture:

The system follows a client-server architecture with a web/mobile frontend and a FastAPI backend. A trained CNN model handles pollen image classification, integrated through the backend API. User data, results, and logs are stored in a secure cloud database, with admin and analytics support.

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

### Example: Order processing during pandemics for offline mode

### Guidelines:

This project aims to build a system that classifies pollen grain images using a trained CNN model. Users can register, log in, and upload images through a web or mobile interface. The backend, built with FastAPI, handles image processing, prediction, and data storage. The system includes an admin panel for user management, monitoring, and analytics.

**Table-1 : Components & Technologies:**

| S.No | Component                       | Description  | Technology  |
|------|---------------------------------|--|---|
| 1.   | User Interface                  | Web/Mobile interface for user interaction            | HTML, CSS, JavaScript / ReactJS / Flutter           |
| 2.   | Application Logic-1             | Handles user registration, login, and image upload   | Python (FastAPI)                                    |
| 3.   | Application Logic-2             | Processes and classifies pollen grain images         | TensorFlow / Keras (CNN Model)                      |
| 4.   | Application Logic-3             | Handles prediction result formatting and dashboard   | Python (Backend Business Logic)                     |
| 5.   | Database                        | Stores user info, history, and prediction results    | PostgreSQL / MongoDB                                |
| 6.   | Cloud Database                  | Cloud-hosted storage for scalable access             | AWS RDS / MongoDB Atlas                             |
| 7.   | File Storage                    | Stores uploaded pollen grain images                  | AWS S3 / Local Filesystem                           |
| 8.   | External API-1                  | Email confirmation and notification service          | SMTP / SendGrid API                                 |
| 9.   | External API-2                  | Optional social login (OAuth)                        | Google OAuth / LinkedIn OAuth                       |
| 10.  | Machine Learning Model          | Classifies pollen grain images into predefined types | Convolutional Neural Network (CNN)                  |
| 11.  | Infrastructure (Server / Cloud) | Deployment on cloud/local system                     | Local Server, Docker, Heroku / AWS EC2 / Kubernetes |

**Table-2: Application Characteristics:**

| S.No | Characteristics          | Description  | Technology  |
|------|--------------------------|--|---|
| 1.   | Open-Source Frameworks   | Backend and ML frameworks used are open-source         | FastAPI, TensorFlow/Keras, ReactJS, PostgreSQL, Docker          |
| 2.   | Security Implementations | Authentication, data encryption, secure access control | JWT Authentication, HTTPS, OAuth 2.0, SHA-256, OWASP guidelines |

| S.No | Characteristics       | Description  | Technology   |
|------|-----------------------|--|--|
| 3.   | Scalable Architecture | Modular client-server architecture supports scale-out with containers            | 3-tier Architecture, Docker, Kubernetes (optional)             |
| 4.   | Availability          | Deployed on scalable infrastructure with high uptime                             | AWS EC2/Heroku, Load Balancer, Auto-scaling Groups             |
| 5.   | Performance           | Optimized API calls, image preprocessing, and model inference for quick response | FastAPI (async support), Redis Cache (optional), CDN (if used) |
